

SENSAPHONE Monitoring Solution

Low Cost Web Based Monitoring

WEB600

Description

The Sensaphone WEB600 is designed to be an easy, cost-effective, network-based monitoring system to notify you when equipment or conditions go awry. The internet browser-based programming makes the device easy to use from any computer on your network. Monitored conditions can include temperature, humidity levels, line voltage, leak detection, UPS systems, and more. The system allows multiple users to be notified immediately of any detected problems. Notification can occur via e-mail, SMS (text message) or SNMP trap. An optional battery backup system (FGD-W610-B) insures that the unit will continue to run if main power fails.

- Six sensor inputs to monitor environmental conditions and/or alarm contacts from other computer equipment such as UPS systems.
- 10/100BASE-T Ethernet port.
- Optional battery backup for uninterrupted performance.
- Compact design allows for wall-mount or tabletop installation.
- Embedded web page to program and manage your Web600 system.
- Notification via e-mail, SMS (text message) or SNMP trap.
- Can be accessed via Modbus®TCP protocol and function as a slave device.

Package Contents

- (1) Sensaphone WEB600
- (1) Instruction Manual
- (1) Terminal Screwdriver
