

SENSAPHONE Monitoring Solution

Remote Satellite Monitoring

SAT4D

Description

Watching over a remote site can be a challenge when the location is very remote. The Sensaphone SAT4D is designed to monitor remote sites no matter where they are located. Instead of relying on phone lines or cell phone services which are not always available, the SAT4D uses direct satellite communications. The result is 100% communication coverage across the United States as well as many other countries. No need to worry about cell phone coverage maps, which carriers are in the area, or analog vs. digital support. It works everywhere, plain and simple.

Not only does Sensaphone make your communication easy, but it also takes away your power source worries, too.

The new SAT4D remote monitoring system requires no power at all! Mount it, connect your dry contact sensors, and walk away. The SAT4D has an internal battery that will operate for at least 5 years without power. Place it anywhere, and only come back every five years to change the battery.

The Sensaphone SAT4D can monitor up to 4 dry contact inputs for alarms. When an alarm occurs, a message is sent via satellite that is delivered to the Sensaphone SAT4D.

Package Contents

(1) Sensaphone SAT4D

(1) Instruction Manual

(1) Terminal Screwdriver

Description	Part Number
SAT4D	FGD-SAT4D
Pole mount kit for SAT4D	FGD-SAT4D-PKIT
One year of communication service	FGD-SATD-1Y
