Serial–to–Ethernet Device Server

Description

The Serial-to-Ethernet Device Server allows you to access your Sensaphone 2000 or SCADA 3000 anywhere on a local LAN or the Internet. Simply connect the device to the serial port on your Sensaphone and connect the Ethernet jack to your network. The software included with the device server will route your computer's serial port to the network-connected device server, thus establishing a fast, direct connection to your Sensaphone.
